

The **QUE Accounting Day Care Security** program is designed to log when a guardian or parent has arrived to “drop off” or “pick up” children from a day care facility. Each guardian is identified by an ID badge or tag unique to the system. When an ID is presented, it is verified and any associated notes, alerts, pictures or messages are displayed. Each time is recorded for future recall.

Supported readers include proximity cards, magnetic stripe, bar code, driver license and smart cards. The programs are easily modified to handle any custom needs. The system will easily work with many access control systems.

Options:

- Access Control Interfaces
- Badge printer
- Weigand interface
- Camera
- Drivers License Scanners

TrackIt Guardian

The Guardian application is comprised of two separate programs, Data capture and the Central program. The Data capture program works with various readers used to capture personal information. For instance, a driver license scanner can be used to scan in name, address and an individual's picture to verify identification. The data can be displayed on the computer monitor for visual recognition by a receptionist

The Central program is where information for parents/guardians and children is entered. Information can be entered by hand or via driver's license scan. With an attached camera, pictures may be taken and stored for future retrieval by the data capture program.

Features

Watch List A list of individuals, who for some reason or another, are considered ineligible for children pick up. An example may be a parent who was recently denied visitations rights

Voice Readout Alerts With the proper equipment a person's name is announced upon arrival. A series of actions that will automate: an email and/or phone call. For example, when children are not dropped off by a certain time.

Handles up to 1000 IDs
Easily expandable to unlimited numbers

Transaction and calendar view
Time records can be presented in a list or in a calendar highlighted by day
Both In and Out time stamps

Database SQL Server or Microsoft Access

Import/Export Capabilities
Pull in guardian lists and export time records

Reports Reports allow for selection by date range, employee, badge and other pertinent information

Camera ready Simply attach a standard digital camera to the computer and you can capture photos and have them automatically stored and aligned to the proper ID

Parent picture
Guardian name

Children Pictures

Comments can be added or displayed when badge is presented

Time and date of badge presented to reader

Plug and Play Support for all major proximity cards and contact-less smart cards as well as bar codes and magnetic stripes

Support A yearly support agreement is available that will handle any application updates, email and telephone questions.

Training Training is free with the first year support fee when a remote access software program is used.

*** Newly added addition for the Guardian program includes advanced pick up capabilities when the Prox card reader is presented at an In gate or Guardhouse. The advanced notice will allow the teacher/caretaker to get children ready for pickup, eliminating valuable time. Vehicle information can be recorded to define the number of passengers allowed.**
